

CUBE CONSULTING

GCX for Grade Control

Practical and Professional Systems

Cube Consulting has a very strong focus on the operating needs of producing mine sites, with a history in building, implementing and training in Grade Control systems built around Surpac. With over forty successful deployments in Africa, Asia and Australia, our geology team have experience across a range of commodities in underground and open pit environments.

GCX provides a logical sequence of commonly performed grade control tasks, integrated into an easy-to-use and intuitive package. The system is available for use in both Open pit and Underground mines, allowing a variety of modelling methods and material classifications, including in multi-product mines. Whether you are using a simple estimation technique or more advanced techniques, once we have a full understanding of your requirements, GCX implementation is rapid.

Each instance of GCX includes the ECX estimation engine for managing estimations in multi-element and multi-domain environments efficiently, repeatedly and in an auditable fashion. We provide full training and documentation to ensure the system is implemented successfully and geologists are productive.

GCX is the most modern system available, developed by the grade control specialists.

CUBE CONSULTING

About Cube

Cube Consulting provides specialist consulting services and software systems to the global mining industry. We are a quality team of geologists and mining engineers with a wide range of skills and experience, applicable from advanced exploration projects through to operational mines across multiple commodities.

Established in 2000 in Perth, Western Australia, Cube Consulting has grown to become a world class Mining Services Company, working with our customers to add value to their projects through considered and practical analyses and advice.

- Geological Services based on extensive operational and field based experience.
- Mine Engineering Consulting Services supporting sound commercial decisions.
- Technology solutions focused on Mine Grade Control and Reconciliation.

Our goal is to ensure our customers succeed through practical and professional advice.
