

GCX II Grade Control

Practical and Professional Systems

Cube Consulting has a very strong focus on the operating needs of producing mine sites, with a history in building, implementing and training in Grade Control systems built around Surpac. With over forty successful deployments in Africa, Asia and Australia, our geology team have experience across a range of commodities in underground and open pit environments.

The new GCX II system includes the ECX estimation engine for managing estimations in multi-element and multi-domain environments efficiently, repeatedly and in an auditable fashion.

GCX II provides a logical sequence of commonly performed grade control tasks, integrated into an easy-to-use and intuitive set of menus and forms. Whether you are using a simple estimation technique or more advanced techniques, once we have a full understanding of your requirements, GCX II implementation is rapid. Parameters such as material classification and presentation settings are stored externally, meaning you have full control over your system. GCX II is fully compatible with a 64-bit environment.

We provide full training and documentation to ensure the system is implemented successfully and geologists are productive. GCX II is the most modern system available, developed by the grade control specialists.

CUBE CONSULTING™

About Cube

Cube Consulting provides consulting services and software systems to the global mining industry. We are a quality team of geologists, mining engineers and IT professionals with a wide range of skills and experience applicable from advanced exploration projects through to operational mines. Our Mining Solutions team have delivered software systems into many mine sites and have established skills in structuring, managing and extracting meaningful information from mining data.

- Geological and Mine Engineering Consulting services based on extensive practical and field based experience.
- Software applications that support our customer's business systems, focusing on the critical areas of Mine Production Management and Grade Control.
- IT services for mining in Database and Systems Administration.

Our goal is to ensure our customers succeed through practical and professional advice.
